

FAIRSHARE CROSS VISIT – POZNAŃ (WODR and CDR)

UC: A comprehensive system supporting the collection of data of the market of the fertilizer and plant protection products in Poland

Our UC involves building a comprehensive system supporting the collection of data of the market of the fertilizer and plant protection products in Poland. It is closely connected to economy of fertilization and plant protection processes. Our UC gives us ability to public data as soon as possible in partial form which is crucial to end users. As a result farmers will get better access to newest and more actual fertilizer and plant protection market information. Advisors will get tool that will improve their work in data collection and they will also get better access to the entire database, which will be useful in daily work, for example in agro-production planning.

A cross visit took place from 19/10/2022 to 21/10/2022 in Poznań (Poland). It was conducted in WODR office and on demonstration farm in Sielinko as well.

The first day, began in the evening with the ice-breakers. A a welcoming diner in the evening was organized for the visitors. It took place a day before a main part of CV. A restaurant with typical food for Wielkopolska Region was chosen. All participants spent a nice time.

The second day of CV was focused on explaining UC's and on intensive workshops where all participants might exchange their knowledge and give a feedback to those who needed it. Discussion was very fruitfull.

The last day of cross visit an interesting farm visit at the demonstration farm was also organized. Participants could hear directly from a farmers what their struggles were and how he might use/benefit from the specific DATS.
