# Calculation of the production value of farms

n°36

## Context

A production value calculator can provide significant assistance to farmers and advisors in calculating the production value of farms in the case of Rural Development Program applications. After entering the appropriate data (crop production, livestock, farm size) the calculator can help to establish whether the farmer meets the application conditions.

## Innovative solution

To meet this need, the Standard Production Value (SPV) calculator was developed by the Hungarian Chamber of Agriculture. The SPV calculator expresses the standardized output value of the agricultural sectors. It is **applicable to any product, sector, crop or livestock** and can be used to determine the total level of profitability of agricultural production for the farmer.

➔ To learn more about the Standard Production Value calculator, check the FAIRshare DATS inventory:

## Recommendations

- Have a multilingual interface for use at the European level.

THIS PROJECT HAS RECEIVED FUNDING FROM THE EUROPEAN UNION HORIZON 2020 RESEARCH AND INNOVATION PROGRAMME UNDER GRANT AGREEMENT N. 818488
