FAIRShare aims to improve farmer engagement with digital technologies through sharing, adapting and enabling more use of digital advisory tools and services (DATS)

Practice abstract n°54

Decision Support Tool to control mildew on potatoes

THIS PROJECT HAS BEEN FUNDED BY THE EUROPEAN UNION HORIZON 2020 RESEARCH AND INNOVATION PROGRAMME
GRANT AGREEMENT ID: 101019163

Decision Support Tool to control mildew on potatoes

n°54

Context

Late blight is the most damaging and common disease of potato, which can cause not only significant production losses but also quality defects. A tool that predicts the risk of development of late blight on potatoes, according to the weather, the variety, the planting and emergence dates, the sanitary state around the plot and the interventions carried out, could make it possible to effectively control late blight in potatoes.

Innovative solution

The decision support tool Mileos® uses local weather data, recorded by farmer's weather station or from the network of farms advisory structures. Mileos® allows producers to change their practices and intervene when necessary.

Recommendation

Take the training course to understand the functioning of the models integrated in the tool!

Learn more about the Mileos® tool & pass the training on the FAIRshare DATs inventory:
