# A comprehensive data collection system in Poland

n°56

## Context

Nowadays the process of fertilizer and plant protection products data aggregation is a very time-consuming process in agricultural advisory sector. Advisors, who are responsible for checking availability and prices with local distributors and gathering information, work under time pressure. This may cause additional errors in data.

## Innovative solution

A comprehensive system supporting the collection of data of the market of the fertilizer and plant protection products in Poland will be created to integrate such process at every level of advisory sector, including the ministry and farmers.

Such system will allow:

- farmers to get better access to newest and more actual fertilizer and plant protection market information
- advisors to have more time to spent on visiting farmers
- advisors, farmers and advisory institutions to better optimize the decisions
- stakeholders to save worktime by providing common and unified data
- to create national database concerning the issue and improve the quality of data.
